## ON THE COVER

Special thanks to Shelley Hundling, a Raccoon Valley Electric Cooperative member-consumer, for supplying this month's cover image. Submit high-resolution photos for consideration to [editor@ieclmagazine.com](mailto:editor@ieclmagazine.com). You could receive \$100!

# LINEWORKERS POWER OUR LIVES

BY SCOTT MEINECKE

You may not think about them until your power goes out, but electric lineworkers protect our homes and communities 24 hours a

day. Like other first responders who keep us safe, lineworkers endure all kinds of weather and challenging conditions.

In April, we officially celebrate Lineworker Appreciation Day to honor the men and women who power our lives. However, the work of lineworkers is celebrated and appreciated every day of the year. Here are some facts about the career of lineworkers.

## Nearly two centuries of history

Lineworkers first appeared during the 1840s rush to spread telegraph service across the U.S., stringing wires between trees and other natural objects. It didn't take long for everyone to realize tall poles were safer and more practical.

Today, more than 122,000 U.S. lineworkers are responsible for maintaining and upgrading the nation's electric grid that connects more than 7,300 power plants to 145 million consumers. The grid also includes 60,000 miles of high-voltage lines, millions of miles of distribution lines and more than 50 million transformers.

## On-the-job training

Described by the U.S. Department of Energy as one of the nation's highest-paid professions that doesn't demand postsecondary education, becoming a journeyman lineworker typically requires a high school diploma or equivalent, training and a paid apprenticeship, which generally spans four years. Apprentice lineworkers receive hands-on training and experience in the field before advancing to "journeyman" status.

## Powering our communities

Restoring electricity after a power outage is just one of the many duties of lineworkers and is often the most visible. In addition, lineworkers perform many other essential services that power Iowa's communities. Some of these responsibilities include:

- Installing and connecting new power lines to homes and businesses;
- Maintaining and performing upgrades to improve our electric grid;
- Diagnosing and pinpointing power delivery issues;
- Planning and managing large-scale projects; and
- Ensuring safe work practices in often challenging conditions.

## Inspiring safety

Each year, lineworkers respond to devastating storms and the damage they leave behind. In addition, lineworkers face various dangers, including electric shock, falls from elevated work locations and roadside traffic accidents.

Lineworkers climb utility poles with up to 40 pounds of safety gear and tools.  
Photo Source: Dennis Gainer

Safety is always the number one priority, so lineworkers continuously receive training to stay mindful of safety requirements and up to date on the latest equipment and procedures.

The next time you see a lineworker, remember to thank them for their essential work. And always remember to move over or slow down if you see any vehicle stopped on the side of the road with flashing lights activated. Our lineworkers and their families thank you!

*Scott Meinecke is the director of safety and loss control for the Iowa Association of Electric Cooperatives.*

## EDITOR'S CHOICE CONTEST

## WIN A \$100 GIFT CARD TO A LOCAL GARDEN CENTER!

It's gardening season! Whether you are planting a garden or a pollinator habitat, it's rewarding to create the perfect backyard oasis. To help your green thumb this season, we're giving away a \$100 gift card from a local garden center.

### Visit our website and win!

Enter this month's contest by visiting [www.ieclmagazine.com](http://www.ieclmagazine.com) no later than April 30, 2024. You must be a member of one of Iowa's electric cooperatives to win. There's no obligation associated with entering, we don't share entrant information with anyone and multiple entries from the same account will be disqualified. The winner of the Express Finish Toaster from the February issue was James Denney, a Southwest Iowa REC member-consumer.

**ENTER ONLINE BY APRIL 30!**

## SAVE THE DATE!

The 2024 Grundy County REC Annual Meeting will be held on Thursday, Sept. 5, at the cooperative's headquarters.

The meal and open house will be 5-7 p.m., with the formal business meeting to immediately follow.

**More information coming soon!**

A Touchstone Energy® Cooperative

District 7: Jason Paper

This institution is an equal opportunity provider and employer.

## CO-OP NAMES NEW OPERATIONS MANAGER

Grundy County REC is pleased to announce that Foreman Erik Freese has been promoted to operations manager, effective June 3. This promotion replaces Dan Stelpflug, who has announced his retirement.

Freese has been with Grundy County REC for 10 years, moving up from apprentice lineman, first class lineman and foreman to this new position.

"Erik has done an excellent job at every position he has held here at Grundy County REC. I am excited to see him continue to grow as a leader in this new role," shares Grundy County REC General Manager Michael Geerdes.

Freese shares that he is excited about this opportunity.

"This position is one that I've always wanted and have strived for since the start of my career," he explains. "Grundy County REC is a place you're proud to say you work for, where people enjoy what they do and who they work with, and it's one of my goals to keep that momentum going strong. I look forward to serving our membership in this new role, continuing to provide safe, reliable and affordable electric service."

We are excited to see what the future holds for Grundy County REC and its members under Freese's leadership and guidance!

## THANK A LINEWORKER

Got power? Thank a lineman! Grundy County REC is proud to recognize Lineworker Appreciation Day on April 8! Our crew does all they can to keep the lights on in all kinds of weather conditions. Thank you, Grundy County REC linemen, for your commitment to providing safe, reliable service for our membership!

# LINEWORKER Appreciation DAY

#ThankALineworker  
They put their lives on the line to keep the power on and people safe.

# SEEKING BOARD CANDIDATES

As an electric cooperative, Grundy County REC is guided by an elected board of directors who represent our members when making important decisions.

It is essential to elect strong directors to your cooperative's board, which is why we encourage members to run in the board elections. Not only should we encourage friends and family to run for board positions, but we also need to get out and vote for those individuals who we think will act in the best interests of our cooperative.

The nomination process puts no limit on the number of candidates in each district. To serve on the board:

- A candidate must hold an active membership and be a bonafide resident in the district he or she is to represent.
- A candidate cannot be in any way employed by, financially affected by or have other interests in a business that competes with the cooperative, its affiliates or sells its products or services to the cooperative. No close relative of a candidate, as defined by board policy, can be employed by the cooperative.
- All candidates should note the time requirements of a director are more than just 12 monthly meetings. Directors should be prepared to devote an average of 25-30 days annually to cooperative business-related activities.

Director elections are scheduled to be held at Grundy County REC's annual meeting on Thursday, Sept. 5. Currently, two board seats are up for election in two of the seven cooperative districts. The incumbent directors whose terms expire in 2024 include:

**Norb Boyle**  
District 2

**Nick Strohhenn**  
District 3

If you are interested in being nominated to run in the 2024 director elections, please contact Allyson Miller at 319-824-5251 or [amiller@grundycountyrecia.org](mailto:amiller@grundycountyrecia.org). She will assist you in connecting with the Nominating Committee member in your district.

Additional information regarding the 2024 annual meeting and director elections can be found at [www.grundycountyrecia.com/annual-meeting](http://www.grundycountyrecia.com/annual-meeting).

Grundy County REC was built, led and shaped by the members we proudly serve. We hope you will consider serving on the cooperative's board and help build, lead and shape the cooperative for the future!

## COMPLAINT PROCEDURE

The Iowa Utilities Board (IUB) requires that all non-rate-regulated utilities post the following notice to its membership.

If a member-consumer has a problem with his/her service, please write or call the office headquarters:

Grundy County REC  
PO Box 39  
Grundy Center, IA 50638  
319-824-5251

If the member-consumer's complaint is related to Grundy County REC's service rather than its rates, and Grundy County REC does not resolve your complaint, you may request assistance from the IUB:

Iowa Utilities Board  
1375 E. Court Avenue, Room 69  
Des Moines, IA 50319  
515-725-7321  
or 877-565-4450  
[customer@iub.iowa.gov](mailto:customer@iub.iowa.gov)

## CO-OP SAFETY MESSAGES

Move over or slow down and stay focused when approaching roadside work zones. Let's all do our part to keep roadside crews, drivers and passengers safe during the busy construction season.

**It's Safe Digging Month!**  
The weather is nice, and we know you can't wait to start those outdoor projects. Remember to practice safe digging by contacting 811 first (by phone or online). Let's work together to protect underground utility lines and ensure a safe environment for all.

# ELECTRIFIED AGRICULTURAL EQUIPMENT

BY JENNAH DENNEY

The electrification trend in agricultural equipment has gained momentum in recent years as farmers increasingly embrace electric vehicles and machinery. This shift offers numerous advantages, including reduced carbon emissions, lower operating costs, improved energy efficiency and quieter operation.

Smaller electric equipment, such as irrigation systems and utility vehicles, are becoming increasingly popular. Many farmers are now using electric motors in place of older, inefficient diesel motors for farm irrigation.

Larger agricultural equipment can be difficult to replace with electric alternatives due to their weight. In response, manufacturers are developing tractors that are more compact,

lower in weight and feature battery-powered options. The compact and lighter design of these tractors allows for better maneuverability in smaller farming spaces, improving efficiency and productivity in the field. For example, a small orchard farmer may opt for a compact electric tractor instead of a larger, traditional tractor. The smaller size and electric power allows farmers to easily navigate between rows of trees without causing damage to the fruit or soil, ultimately increasing the yield and reducing maintenance costs.

In addition to smaller equipment, drones equipped with electric agricultural technology are proving to be valuable in many cases. Electric drones allow farmers to monitor crops, perform precision spraying and even participate in crop pollination. Equipped with

specialized sensors and cameras, these drones capture high-resolution imagery to help farmers make informed decisions about crop management. The versatility and cost-effectiveness of electric drones make them a valuable tool for optimizing crop health, detecting pests and enhancing irrigation practices.

## Use for various types of farming operations

Here are some common types of farming operations that benefit from electrified agricultural equipment.

**Crop farming:** Electric equipment, such as tractors, sprayers and harvesters are used in crop farming operations for tasks like plowing, planting, spraying pesticides, drying and harvesting crops.

**Livestock farming:** Electric equipment can be utilized in livestock farming

# THE FUTURE OF ELECTRIFIED AG

Many farmers are making the transition from gas-powered equipment to electric models. Electric-powered farming equipment offers lower operating costs, improved efficiency and quieter operation. Here are a few ways the electrification trend is gaining momentum on the farm.

1

**Electric tractors** show promise for increased efficiency and reduced maintenance.

2

**Electric motors for irrigation** are more efficient than diesel motors and result in greater cost savings for farmers.

3

**Drones equipped with electric agricultural technology** make them a valuable tool for optimizing crop health, detecting pests and enhancing irrigation practices.

for tasks such as feeding, milking and waste management.

**Vineyards and orchards:** Electric pruning equipment can be used in vineyards and orchards for precision pruning of grapevines, fruit trees and bushes.

**Greenhouses and nursery operations:** Electric equipment such as tillers, seeders and potting machines are often used in greenhouse and nursery operations for efficient soil preparation, seeding and transplanting.

**Organic farming:** Electrified agricultural equipment is also used in organic farming operations, with a focus on sustainability and environmentally friendly practices. Electric tools and equipment help minimize the use of fossil fuels and reduce emissions.

**Benefits of electrified ag equipment**  
Electrified agricultural equipment offers several benefits beyond reducing carbon emissions.

Electric drivetrains are simpler and easier to maintain compared to traditional tractors, resulting in lower maintenance costs. Additionally, electric equipment is more energy efficient, converting a higher percentage of electrical energy into usable work.

Electricity flowing through batteries and electric motors is more efficient than diesel being delivered to farms, moved into tanks and burned in diesel engines. As battery technology advances, further improvements in electric farming equipment are expected.

This efficiency leads to reduced energy consumption and lower operating costs for farmers. Additionally, the quieter operation of electric equipment minimizes disruptions to nearby communities, livestock and wildlife, making it ideal for residential areas or sensitive environments.

## Considerations for farmers

When considering electrified equipment, farmers should evaluate their specific needs, including power requirements and operational tasks. Farmers should work with their local electric cooperative to assess the farm's power supply capacity to ensure it can handle the additional load without causing issues. By conducting a thorough analysis of their unique needs and goals, farmers can determine if adopting electrified agricultural equipment is a suitable and advantageous option.

The electrification of agricultural equipment presents a promising future for farmers. Farmers can improve operational efficiency and benefit from cost savings by embracing electric vehicles, machinery and drones.

*Jennah Denney writes on consumer and cooperative affairs for the National Rural Electric Cooperative Association, the national trade association representing more than 900 local electric cooperatives.*

# EGG-CEPTIONAL

## RECIPES

### FAMILY BREAKFAST CASSEROLE

- 1 pound sausage
- 6 slices white bread
- 4 large eggs
- ½ teaspoon salt
- 1 teaspoon mustard powder
- 2 cups whole milk
- 1 cup mild cheddar cheese

Cook sausage on low heat, then drain. Line bread in a 9x13-inch pan sprayed with olive oil. Mix eggs, salt, mustard powder and milk; stir in sausage. Pour over bread and sprinkle cheese over egg mixture. Cover and refrigerate overnight. Bake covered at 325 degrees F for 45-60 minutes. Uncover and bake for 30 minutes. Serves 6-9

Arlene Husak • Toledo  
T.I.P. Rural Electric Cooperative

### CRUSTLESS CUSTARD

- 6-8 egg yolks
- ½ cup sugar
- 2½ cups half-and-half (or milk)
- 1 teaspoon vanilla
- ½ teaspoon nutmeg
- ½ teaspoon cinnamon

Beat all ingredients together. Pour in pie pan or custard cups and bake at 450 degrees F for 15 minutes. Turn oven down to 350 degrees F and continue to bake until knife comes out clean. Serves 8

Sara Riley • Conrad  
Grundy County Rural Electric Cooperative

### BREAKFAST FRENCH TOAST

- butter, to coat bowl
- 2 eggs, beaten
- 1 tablespoon milk
- 2 slices dry bread
- cinnamon, to taste

Coat a microwavable bowl with butter, then add eggs. Add milk and beat. Break up dry bread and combine with egg mixture. Shake cinnamon on top as desired. Microwave 1 minute, stir, then microwave 1 more minute.

Ken and Jill Leafgreen • Fairfield  
Access Energy Cooperative

### NO CRUST CRAB QUICHE BAKE

- 8 eggs (or 16 ounces liquid egg product)
- 2 cups half-and-half
- 1 red pepper, chopped
- 8 ounces imitation crab meat, chopped
- 1 cup bread crumbs
- 1 cup Swiss or mozzarella cheese
- 1 cup cheddar cheese
- 2 green onions, chopped
- ½ teaspoon salt
- ¼ teaspoon pepper

Combine all ingredients in a bowl, then transfer to a greased 9x13-inch baking dish. Bake at 350 degrees F for 30-40 minutes or until a knife inserted in the center comes out clean. Let stand for 10 minutes to set up. Serves 6-8

Diana Thorn • Marshalltown  
Consumers Energy

## CARB-FREE EGG BAKE

- 2 cups sausage, cooked and crumbled
- 1 garlic clove, minced
- ½ cup onion, chopped
- 12 eggs
- ¾ cup half-and-half
- ¾ cup sour cream
- 1½ cups cheddar cheese
- 1 teaspoon salt
- ½ teaspoon pepper

Cook sausage, garlic and onion, drain off grease. In a large bowl, whisk together eggs with half-and-half. Add sour cream, cheddar cheese, sausage mixture, salt and pepper. Mix well and pour into buttered 9x13-inch pan. Bake at 350 degrees F for 40-60 minutes. Recipe can be refrigerated and baked the next morning. *Serves 10-12*

**Glenda DeBoer • Rock Rapids  
Lyon Rural Electric Cooperative**

## AIR FRYER EGG FOR ONE

- 1-2 tablespoons picante sauce
- 1 egg
- 1-2 tablespoons cheddar cheese, grated

Preheat air fryer to 370 degrees F. Spray a custard dish or similar dish with non-stick cooking spray. Add picante sauce. Break egg on top of sauce and sprinkle with cheese. For a runny yolk, air fry for 6 minutes, add more time for a firm yolk. For a sodium-restricted diet, reduce sauce and cheese. *Serves 1*

**Sandra Lacey • Danbury  
North West Rural Electric Cooperative**

## EGG SPINACH CASSEROLE

- 2 10-ounce packages frozen spinach
- 1 pound sausage
- ½ cup onions
- 7 eggs
- 4 cups cottage cheese
- 6 tablespoons flour
- 8 ounces cheddar cheese
- 3 tablespoons butter
- optional: broccoli, asparagus

Quickly thaw spinach in colander under hot water and drain well. Spinach can be substituted with broccoli or asparagus. Cook sausage with onions, drain. In a large bowl, mix spinach, sausage, eggs, cottage cheese, flour and cheddar cheese. Put mixture in a greased 9x13-inch pan and dot with butter. Cover and bake at 350 degrees F for 1 hour. *Serves 10-12*

**Trudy Woolman • Stuart  
Guthrie County Rural Electric Cooperative Association**

## BACON EGG CASSEROLE

- 6 slices bacon, diced
- 1 teaspoon minced garlic
- 1 small onion, diced
- 1 red bell pepper, chopped
- 1 green bell pepper, chopped
- 12 eggs, beaten
- ½ teaspoon salt
- ¼ teaspoon pepper
- 1-2 cups shredded cheddar cheese

In a large skillet, cook bacon over medium heat until it becomes soft. Add minced garlic and onion, and cook until bacon begins to brown. Add red and green peppers, cover and cook for 5-10 minutes or until the veggies are soft and bacon is browned, stirring occasionally. Remove from heat and let cool. In a medium bowl, whisk together eggs, then add salt and pepper. Add cooled bacon and veggie mixture to the beaten eggs and stir. Add cheese and pour into greased 9x13-inch baking dish. Bake at 350 degrees F for 25-30 minutes or until top is set. Let cool slightly before serving.

**Kathryn Meyer • Rowan  
Prairie Energy Cooperative**

Des Moines, IA 50322-2992

# DIGGING FOR DOLLARS: HOW TO SAVE MONEY IN THE GARDEN

BY GEORGE WEIGEL

Plant prices are up sharply. So are insecticides, fertilizers, deer repellents, mulch, tools and other accessories gardeners use to keep their green investments alive. Even bagged dirt is no longer dirt cheap. What's a gardener on a tight budget to do? Fortunately, this is one pastime that lends itself to lots of belt-tightening strategies.

## Ways to save on plant purchases

Consider perennials relegated to a bargain rack after they've finished blooming for the season. Annuals and vegetables that are still viable but unsold after the spring rush are another great way to save. You can also look for trees and shrubs that are misshapen markdowns but fixable via pruning and patience. Tulips, daffodils and other spring-blooming bulbs are often 50% off when unsold but still plantable by the end of October.

If you shop local, get on your favorite garden center's loyalty program.

These programs offer discounts, coupons, rewards and special sales to regular customers. While you're at it, let local garden center managers know you're interested in plants they want to clear out.

Pay attention to unconventional sources including plant societies, Master Gardeners, libraries, public gardens, farmers markets, schools and garden clubs – all of which often hold plant sale fundraisers using divisions from members' yards, locally started seedlings and discounted greenhouse transplants.

## Ways to trim the plant budget

Wherever you buy plants, opt for less-expensive smaller sizes. Given patience and good growing conditions, a quart-sized perennial will end up at the same mature size as a gallon-sized one but at a significantly lower starting price.

Opting for small especially saves on trees, which can double in price for just two or three feet of additional height.

Starting new plants from seed yields way more plants to the dollar than transplants. Planting seeds directly in the ground outside is even less expensive, bypassing the need for lights, pots and potting mix.

A third plant budget-stretcher is mining your own plants for expansion. Most perennial flowers can be dug and divided into fist-sized pieces after several years of growth, giving you free plants to use elsewhere.

Check with friends and neighbors to see if they'd like to trade divisions, which can yield free new varieties for your yard. New shrubs, trees, roses and evergreens can be created by snipping 4- to 6-inch pieces off the tips of "mother plants" and sticking them into moist potting mix. That induces roots to grow from the buried cut ends, giving you a new "baby" copy of the plant.

## Potted plant savings

Save on your potted plant budget by starting with fewer plants each season. With patience, pots of fewer premium-priced potted annuals will fill in eventually and cost less than tightly packed ones.

Another pot option is scavenging the yard for perennial flowers you can dig and divide to use in pots. The best are ones with colorful foliage that add interest beyond the few weeks they're in flower, such as coralbells, hostas, golden sedge, variegated liriope and ferns. Return the perennials to the ground in fall to overwinter and mine again next year.

Most so-called "houseplants" (crotons, palms, snake plants, peace lilies, rubber plants, etc.) are tropical or sub-tropical species that do perfectly fine outside in northerly summers and inside over winter.

## Ways to save on gardening products

The fastest way to save on gardening products is to cut out things your plants don't need and reduce the amounts you use, such as fertilizer.

Plants take up only the nutrients they need. Adding more doesn't make them grow bigger or better and is a waste of money.

If plants are growing well, there's usually no need to add anything. If they're not, a soil test will tell if lack of nutrition is a culprit – along with precisely what nutrients are needed and in what amounts. Extension offices and many garden centers offer inexpensive DIY soil-test kits to help you spend fertilizer dollars wisely

Bug and disease sprays are another potential cost-saver. Some gardeners routinely use pesticides "just in case," wasting money and potentially killing beneficial insects that would've controlled pest bugs naturally (and at no charge).

Expensive potting mix can be stretched by mixing your own from bulk ingredients or by "refreshing" last year's saved mix with half new mix.

*George Weigel is the author of five gardening books and is a special contributor to Iowa Electric Cooperative Living magazine.*

Perennials with colorful foliage, such as the coralbells in the middle of this container, can be dug and used in pots to trim the flower budget.

Dividing clumps of expanded perennials is a way to add plants at no charge.

Saving your own seeds to plant next year is a practice that cuts the seed-buying budget.

Ground-up wood chips from tree branches makes a good landscape mulch – and sometimes is available free from local tree companies.

Yard sales are one unconventional source where you might find plant bargains.

Plants are less expensive when you start them from seed vs. buying transplants that are greenhouse-grown.

# SIX MONEY-SAVING GARDENING PRACTICES

Changes in how you garden is an avenue for limiting expenses. Here are six tips to consider:

**1 Make the most of retail seed.** Most seeds bought in packs are good for two or more years, especially if you store them in a cool, dry place (the refrigerator is perfect). If the packs have more seed than you can use, share or trade with gardening friends and neighbors or look for seed swaps.

**2 Make your own compost.** Start a pile or two where you can recycle your property's leaves, grass clippings, spent plants and kitchen scraps into highly nutritious (and free) compost.

If you buy bagged compost (or soil or mulch), look for discounted broken bags.

**3 Watch for annuals that pop up on their own.** Flowering annuals might sprout in spring from your own self-seeders as well as seeds brought in by

birds, bugs and the wind. If you recognize these as flowers and not weeds, you've just been gifted with free flowers.

**4 Take season-long advantage of all vegetable garden space.** Many gardeners plant veggies once in spring, then let the space empty after harvest. Reload harvested space with new crops planted in summer to fully use the growing season.

**5 Save water by letting lawns go dormant during a hot, dry summer spell.** Most turfgrass can survive without water for at least three or four weeks after going brown in a summer-survival dormant state. There is no need to water until then.

**6 Save on mulch by covering bare ground with low, spreading ground cover plants.** Examples are creeping sedum, creeping thyme, leadwort and liriope. You'll pay more at planting time, but as the plants spread, they'll hold down weeds without having to buy mulch.

# Energy Trail Tour 2024

Grundy County Rural Electric Cooperative and Corn Belt Power Cooperative invite you to join us for one of two Energy Trail Tours being offered this summer. This 3-day adventure will allow you to experience, firsthand, how your power providers convert energy from water, wind and coal into electricity. View coal being mined and see how those mines are then returned to productive farm and native grass lands. Enjoy interactive walking tours through a hydroelectric and coal-fired energy generation facility and other stops along the way. Meet other cooperative member-owners while traveling together across the Dakotas on-board a motor-coach bound for the North Dakota's Energy Loop.

Complete and submit the below coupon to Grundy County REC by **May 3, 2024**. One lucky couple will be selected at random from those who sign up. Please keep in mind that there is a walking element to this tour, and attendees will be traveling via charter buses with stairs. The only expense this couple will incur will be mileage to Humboldt and miscellaneous meals.

## **DATES:** June 26-28

Attendees will arrive in Humboldt on June 25 in preparation for an early departure.

☒ **YES**, please enter our names in the drawing for the trip. We understand that if we confirm our attendance and then cancel, we will be billed \$100.

*Clip this coupon and return to cooperative by May 3, 2024; only current members are eligible to enter.*

# INTRODUCING THE 2024 SCHOLARSHIP RECIPIENTS

Each year, Grundy County REC distributes three \$1,000 scholarships and one \$1,000 Basin Electric Cooperative scholarship to member students who are pursuing higher education. This year, we received a record number of applications, making the final selection even more difficult! We are proud to announce our four scholarship recipients for 2024. Learn about these four member students, their accomplishments, goals and more below.

## Lillian Bru

*\$1,000 Grundy County REC scholarship recipient*

**Parents:** Laura and Ryan Bru

**School:** Green Mountain Garwin High School

**Future plans:** In the fall, I plan on attending Des Moines Area

Community College to study agribusiness and agronomy. After completing those courses, I plan to transfer to Iowa State University to pursue my bachelor's degree in agribusiness and minor in agronomy. With those certifications, I plan on a career in the agriculture industry.

**What do you enjoy doing in your free time?** I enjoy showing my pigs and lambs, reading, going for runs and baking with my mom.

**Advice for high school students:** My advice for high school students is to stay active and involved. There are so many opportunities outside of what you already do and know!

**Your favorite high school memory:** When a lab partner and I were participating in a science lab, and the bottom of the glass beaker completely broke off in front of the teacher. We all ended up laughing it off, even the teacher!

## Ryan Hosek

*\$1,000 Basin Electric Cooperative scholarship recipient*

**Parents:** Rebecca Dostal and Justin Hosek

**School:** North Tama High School

**Future plans:** I hope to attend Buena Vista University to pursue a major in ag business and minor in animal science.

Out of college, I hope to find a job close to my parents in Tama County so I can continue being a member of my family's farm and contribute to my own future family. Someday, I hope to take over the family farm and pass it on to my children when I retire.

**What do you enjoy doing in your free time?** I enjoy helping on my family farm. I also enjoy playing sports and being outdoors hunting and fishing.

**Advice for high school students:** My advice for underclassmen is to be involved in as much as possible. The more you are involved in, the more people you get to meet and the more you learn.

**Favorite high school memory:** My favorite high school memory has been participating in FFA events, including soil judging and other CDE competitions.

## Claire McCumber

*\$1,000 Grundy County REC scholarship recipient*

**Parents:** Shelley and Nick McCumber

**School:** Dike-New Hartford High School

**Future plans:** I plan to attend the University of Iowa as a nursing major. After graduating with

my bachelor of science in nursing, I hope to pursue my master's degree to become a licensed nurse practitioner. My goal is to work in a local hospital.

**What do you enjoy doing in your free time?** I enjoy reading, spending time with friends and boating in the summer.

**Advice for high school students:** My advice for high school students is to enjoy every moment. It's amazing to look back on the fun times you experienced with your friends and family.

**Favorite high school memory:** My favorite high school memory was playing at state volleyball the last four years and getting to play so many different sports.

## Larissa Morrison

*\$1,000 Grundy County REC scholarship recipient*

**Parents:** Shellie and Michael Morrison

**School:** North Tama High School

**Future plans:** Growing up, I have lived a very active lifestyle, with passions for fitness and wellness. These values

inspired me to pursue the profession of occupational therapy assistant. I have been accepted into the pre-program for occupational therapy assistants at Hawkeye Community College. After the completion of my associate of applied science degree, I hope to work with the adolescent age group. I aspire to help children and young adults reach their highest physical potential and live an active and joyous life.

**What do you enjoy doing in your free time?** I enjoy being active by lifting, running and walking. I also enjoy golfing and hanging out with my friends.

**Advice for high school students:** Enjoy the moment. With my senior year coming to a close, I often think back over the last four years and remember the good times. I am thankful to have made many friends and memories I will never forget.

**Favorite high school memory:** My favorite high school memory has to be my junior year prom; dancing and having a good time with my peers was very memorable.

# CELEBRATE EARTH DAY: WHY TAKING STEPS TO CONSERVE MATTERS

BY MIRANDA BOUTELLE

Earth Day is April 22, a time when we celebrate this beautiful planet we are lucky to call home. During this day of appreciation, it's a great time to take action at home by making changes to conserve energy. If we all contribute, even small adjustments and changes to how much energy we use can have positive impacts.

## Conservation vs. efficiency

Before diving into ways to use less energy, it's important to know the difference between conservation and energy efficiency. Energy efficiency refers to equipment that uses less energy to do the same job. For example, ENERGY STAR®-certified refrigerators keep food just as fresh as standard models but use about 9% less energy to do it, according to the U.S. Department of Energy. Conservation is using less energy by changing behavior and practices. For example, adjusting your thermostat to be closer to the temperature outside during

warmer months or turning off the lights or a ceiling fan when you leave the room conserves energy.

Conservation has the best return on investment. It's often free and can save a little or a lot – depending on what you are changing and how drastic of a change you make.

## Tackle the biggest energy users

The biggest energy user in the average household is heating, ventilation and air conditioning (HVAC) equipment. Keep your house a little warmer in the summer and a little cooler in the winter. A good rule of thumb is to set the thermostat to 68 degrees F in the winter and to 78 degrees F in the summer.

Typically, the second biggest energy user is the water heater. Replacing an electric storage water heater with a heat pump/ hybrid water heater is an excellent example of an energy-efficient project. Adjusting the temperature

setting to the recommended 120 degrees F and using less hot water in your home conserves energy. Wash clothes in cold water. When washing dishes, don't let the hot water run longer than necessary.

Earth Day also lends itself to thinking of ways we can connect with each other and limit screen time. Look for electricity-free opportunities with your family or community. Consider unplugging and getting outside with friends and family. Going for a hike, a walk or even just spending time in your yard or local park is a great way to reconnect with others and nature. Before you head out, adjust that thermostat and turn off everything possible. Unplug chargers from outlets and turn off all electronics and lights.

*Miranda Boutelle writes on energy efficiency topics for the National Rural Electric Cooperative Association, the national trade association representing nearly 900 electric co-ops.*

Even small changes, including unplugging chargers from outlets and turning off lights, conserve energy in your home.

On Earth Day, think of ways your family can limit screen time and connect with each other.

Look for electricity-free opportunities with your family, such as starting a game night.

Before you go for a walk with your two- or four-legged companions, adjust the thermostat and turn off everything possible.

# IT'S OK WHEN THINGS MAKE YOU HAPPY

BY DARCY DOUGHERTY MAULSBY

One of my guilty pleasures is trolling thrift shops, garage sales, antique shops and other secondhand stores. My mom's father, Ralph Brown, was one of the original fans of Goodwill, and he passed his love of thrifting onto my mom, who passed it onto me – so that makes me a third-generation thrifter, right?

Some of my favorite finds revolve around dishes and farm-themed items. I savor the moments when I'm sipping green tea from my blue Fiestaware teacup and saucer, which I scored at the Coralville Goodwill last summer. One of my latest quirky finds came from the Goodwill in Spencer – two cow-themed mugs for 99 cents each. Cartoon designs of Holstein cows on vacation to the Black Hills, Florida, Mardi Gras in New Orleans and a ski resort in Colorado make me smile.

When I posted a picture of these fun mugs on my Facebook page, one of my friends shared this comment:

“Adorable! I have a picture on my wall of a farm wife milking her Jersey cow, out in a pen with a chicken or two and a small cat. I bought it at an auction years ago and love it – just because. I couldn't begin to explain to anyone what thoughts it conjures up for me when I look at it. Some days, I am so thankful

I've lived long enough to have time to just sit, think and remember.”

## Research connects happiness to ordinary things

This got me thinking – can things truly make us happy? Is it OK if they do? For years, we've been advised that if we want to be happier, we should invest in experiences rather than things. But what about those go-to purchases of ours – maybe those comfortable boots, an interesting coffee mug or fresh-cut flowers – that just make us feel good?

It turns out that the material things in our lives aren't incidental to our happiness. That's according to Ingrid Fetell Lee, author of “Joyful: The Surprising Power of Ordinary Things to Create Extraordinary Happiness.”

Her research shows that the objects in our surroundings can have a surprisingly powerful influence on our emotional well-being.

Take flowers, for example. Studies show that just being exposed to flowers can lift our mood, reduce anxiety, improve memory and even decrease the pain medication patients use in a hospital after surgery.

Manmade objects can have similar effects. Did you know that objects with round or symmetrical shapes are known to elicit positive emotions, while sharp, angular, asymmetrical objects are associated with tension and sadness? That helps explain

why I love the glossy, round, bright red teapot I purchased at a local thrift shop for \$2.

It's clear that objects can affect our happiness in deep ways, some that we aren't even consciously aware of. My advice? Choose items that enhance your joy and well-being rather than detract from it.

## Linking the past and present

Objects that inspire joy give you a lasting sense of pleasure. Not only do these items connect you to the past (I'm thinking of the antique oak secretary/desk with a beveled, oval mirror in my living room), but the feelings they evoke are equally potent in the present.

Rather than thinking of our favorite things as wasteful or unnecessary indulgences, let's consider them treasures that can bring out our best selves.

Do you have an item that makes you happy every time you look at it or use it? Tell me about it at [yettergirl@yahoo.com](mailto:yettergirl@yahoo.com). I look forward to hearing from you.
